Machine Learning Engineer

Summary

Develops and deploys AI, machine learning, and large language models into production systems for real-time applications and automation. Maintains ML pipelines, monitors model performance, and implements CI/CD/CT workflows for machine learning models using AWS SageMaker. Designs Python decision support software and integrates serverless APIs with AWS API Gateway and AWS services.

Skills

Machine Learning, Python, AWS, ML pipelines, AI, LLMs, AWS Sagemaker, CI/CD, Monitoring, Docker, Backend Development, AWS API Gateway, AWS Lambda, AWS CodePipeline, PyTorch, LangChain, Open-Source Development, Communication skills

Experience

Technical Lead, Dreamverse Holdings

Jan 2024 – Present | Johannesburg, Gauteng

- Developed and deployed AI and machine learning models at scale, automating production workloads, monitoring performance, and maintaining ML pipelines for real-time applications.
- Integrated large language models and advanced ML algorithms into production systems and optimized them for real-time deployment, improving automation and decision-making for client systems.
- Built client web and mobile applications alongside CI/CD automation pipelines for building and deploying web apps, running performance benchmarks and maintaining high availability and security.

Volunteer Software Developer, Wikimedia

Oct 2023 – Present | Remote

- Migrated machine-generated article descriptions from Toolforge to Liftwing, maintaining smooth and efficient operation of article-description inference services.
- Completed operations, administrative, and engineering tasks across Data Platforms teams, including the Machine Learning team developing machine learning services for Wikimedia sites.
- Contributed open-source work to the Machine Learning, Data-Platform-SRE, and Anti-Harassment teams.
- Developed and maintained backend services and Anti-Harassment features for operational quality, supporting a safe and inclusive environment for users.
- Participated in community initiatives including Pilot-Flag and Test-Grounds, improving the quality and relevance of machine learning models.
- Helped improve Istio mesh traffic transparent proxy capabilities for external domains accessed by Lift Wing, increasing service connectivity and performance.

Research Associate: Python Developer, UJ PEETS

Jan 2021 – Dec 2023 | Johannesburg, Gauteng

- Implemented and maintained continuous integration, delivery, and testing (CI/CD/CT) workflows for machine learning models using AWS SageMaker.
- Built scalable automated processes for data analysis, machine learning model development, and implementation to support continuous improvement.

- Designed a Python-based GUI Decision Support System for Risk-Based Water Quality Guidelines, improving user accessibility and interaction.

Full Stack Developer, Penyesa SA

Dec 2018 – Dec 2020 | Sandton, Gauteng

- Authored and maintained CI/CD pipelines using AWS developer tools including AWS CodePipeline and AWS CodeBuild.
- Responsible for integrating serverless API with AWS API Gateway and AWS Services.
- Worked on cloud architectures, application containerization, deployment, alerting, monitoring, and automation.

Education

Electrical and Electronics Engineering (BEng studies; incomplete), University of Johannesburg (2017–2018)

Certifications

AWS Certified Cloud Practitioner (expired), Amazon Web Services (2018)
