Sabenza IT & Recruitment

Application: Senior ML Engineer

Dear Hiring Manager,

I am applying for the Senior ML Engineer role advertised by Sabenza IT & Recruitment in Johannesburg, Gauteng. I fit this position because of my experience integrating large language models into production systems, maintaining real-time ML pipelines at scale, and implementing continuous integration, delivery, and testing workflows for machine learning models.

In my previous work, I developed and deployed AI and machine learning models at scale, focusing on automating production workloads, monitoring performance, and maintaining machine learning pipelines for real-time applications. Additionally, I integrated large language models and advanced machine learning algorithms into production systems, optimizing those models for real-time deployment to improve decision-making and automation for client systems.

To maintain reliable model delivery and automated testing, I used AWS SageMaker to implement and maintain continuous integration, delivery, and testing (CI/CD/CT) workflows specifically for machine learning models.

I am drawn to this role with Sabenza IT & Recruitment because of its focus on turning prototypes into production-ready AI and machine learning solutions on Databricks and Azure Kubernetes Service while collaborating across data science, cloud, and infrastructure teams to meet enterprise standards. I welcome the opportunity to have a conversation about how my experience deploying models and maintaining production pipelines can support your requirements.

Kind regards,

Kenny Chirombo
